PROJECTS

Pandoras Courier

The system focuses on efficient courier services between Romania and multiple European countries. Tailored for administrators and drivers, it simplifies international parcel logistics, ensuring efficient operations and a seamless courier experience.

Responsibilities:

- extended application to provide services for three more European countries
- implement management functionalities for vouchers
- optimized the drivers' pickup process interface for improved efficiency and user experience
- integrated reCaptcha mechanism into the tracking user application to bolster security and reliability
- automated membership plan analytics, delivering comprehensive, data-driven insights for enhanced decision-making

Trackify

Tracking application, integrated with clockify to provide a practical solution for employee management.

Responsibilities:

- implemented a points-based benefits system
- improving the monthly scheduled employer statistics
- review feature, simplifies the entire review process within the company
